Experience

Design Engineer

May 2021 to present

Keatext

- Owned product design and front-end direction, serving as the bridge between design and engineering.
- Redesigned the core user experience for conversational AI that traditional UI patterns didn't address
- Partnered with product owners and engineers to shape roadmap and strategy, establishing design-to-development workflows that cut handoff loops
- Designed, built, and maintained production React + TypeScript components with interaction fidelity and accessibility at their core
- Converted fragmented UI work into a reusable component system with clear APIs, built on design tokens

UX/UI Design Lead

June 2017 to May 2021

Spartan Bioscience

- Designed and built interactive, high-fidelity prototypes and production interfaces for medical software and training products
- Built a design system from the ground up with full documentation in Storybook
- Developed and maintained a web-based customer support portal and corporate site with headless CMS integration
- Collaborated with cross-functional teams spanning engineering, management, and executive leadership
- Synthesized multi-channel feedback into iterative design revisions, maintaining a single source of truth

Marketing Coordinator

April 2015 to June 2017

Spartan Bioscience

- Contributed to UX and product design alongside the core team
- Managed the company WordPress site and server infrastructure
- Designed marketing collateral and training documentation
